EMERGENCY CONTACTS

Veterinarian: _____

Clinic: _____

Phone: _____

After-hours contact: _____ Phone: _____

CONTACT OUR VETERINARIAN IF YOU SEE ANY OF THESE SIGNS

These signs could mean our pet has low blood sugar (hypoglycemia), which can be fatal if untreated:

- Weakness
- Behavioral changes
- Anxiety
- Depression
- Muscle twitching
- Seizures

If you see any of the above signs, give our pet a small amount of glucose/powder solution or corn syrup into its mouth. If it is unable to swallow or is unconscious, rub the glucose/powder solution or corn syrup on the gums and call our veterinarian. When our pet is able to swallow normally again, provide its usual meal and call our veterinarian.

Continued on reverse.

DAILY ROUTINE FOR OUR DIABETIC PET.
